

#80078 Muse Lamp Installation Instructions

HANDLE WITH CARE!

When relocating the lamp make sure the glass blocks are secured by the metal studs. Keep the lamp level and support the glass blocks.

1. Place the metal frame on an even surface. Place the clear liner strips (A) on the metal base (B).

2. The glass blocks (C) come with 2 plastic protective sleeves attached on one side. Face this side against the center metal frame (E).

3. Align the holes on the glass and the holes on the center metal frame (E).

Glass blocks may need to be lifted off the metal base. The process can be made easier when one lifts the glass block to the correct position while the second person screws in the studs.

4. Insert the metal studs (D) through the glass blocks and screw firmly into the metal frame (E).
